

ADITYA J. SAWANT

sawantaj20@gmail.com | LinkedIn | Website | GitHub | 9594552902

SKILLS

- **Languages:** Java, TypeScript, JavaScript, C++, Python, Batch Script, SQL
- **Frameworks and Tools:** Spring Boot, Spring MVC, J2EE, Oracle SQL, GitHub Copilot, Gradle, Hibernate, Angular JS, React JS, Copilot, Node.js, Docker, AWS, Git, MongoDB, Microservices, Elasticsearch, Linux.

EXPERIENCE

Persistent Systems Ltd.

Lead Software Engineer

Pune, India

April 2026 - Present

- Developed REST APIs for features with over **100k active users** by implementing controller and service methods to support UI and business logic, following SOLID principles for maintainable and scalable code.
- Increased search performance and **decreased memory consumption by about 22 percent (32 GB to 25 GB)** in the Elasticsearch cluster by rewriting and optimizing queries and tuning shard allocation, resulting in faster query execution and more efficient utilization of system resources
- Migrated production Elasticsearch infrastructure from **version 7 to 9 with minimal production downtime** by provisioning and configuring a new cluster, enabling query-level authentication, performing data migration from the legacy system, and updating search queries to ensure compatibility and reliability
- Technologies: SpringBoot, Gradle, Hibernate, Oracle SQL, Apache ActiveMQ, Elasticsearch, junit, Mockito, Git, BitBucket, Jira, Confluence, Jenkins, Docker, GitHub Copilot

Senior Software Engineer

August 2024 - April 2026

- Upgraded performance of read-heavy backend services, **reducing response times from 90s to under 5s**, by redesigning database access layers using optimized SQL joins, Hibernate mappings and DTO patterns
- **Mitigated security vulnerabilities by 55 percent (112 to 50)** by identifying and resolving critical XSS and CSRF issues, strengthening the security and reliability of core backend services
- **Maintained 100 percent application uptime** by managing CI/CD pipelines with Jenkins and artifact management with Apache Archiva, enabling consistent builds and deployments to WildFly servers

Software Engineer

August 2022 - August 2024

- **Reduced manual data processing time by 70%** by designing and implementing a Java Spring-based backend service that handled asynchronous attachment uploads and automated client email delivery, improving reliability and system throughput
- **Optimized operational efficiency by 30 percent** by building a data aggregation module that consolidated application data and displayed key application analytics, eliminating manual SQL-based analysis
- **Improved development productivity upto 20 percent by integrating GitHub Copilot** into daily development workflows, speeding implementation of features and bug fixes while maintaining code quality and consistency.

PROJECTS

Flash Sale System

January 2026 – March 2026

- Designed and built a high-concurrency flash sale system to simulate large e-commerce sale events with limited inventory and thousands of simultaneous purchase requests.
- Handled traffic spikes of over 10K concurrent users by implementing a token-based purchase flow and Kafka request queueing, preventing overselling during peak demand.
- Ensured consistent inventory management using Redis-based distributed locking and reservation, enabling atomic stock deduction across services.
- Developed microservices using Java, Spring Boot, MySQL and Kafka, and used Redis caching to reduce database load during high traffic.
- Containerized services with Docker and designed the architecture for horizontal scalability and fault tolerance.

EDUCATION

Pune Institute of Computer Technology, Pune, India

Bachelor of Engineering, Computer Engineering

April 2018 — April 2022

Overall GPA: 9.26

RESEARCH PRESENTATIONS

R. Dange, A. Sawant, A. Chavan, P. Bhardwaj and A. Bunde, "Decentralized Fundraising Application Using Blockchain," 2022 IEEE International Conference on Blockchain and Distributed Systems Security (ICBDS), Pune, India, 2022, pp. 1-5, doi: 10.1109/ICBDS53701.2022.9935998.

AWARDS AND HONORS

- **Top Talent FY2026 Award**
Persistent Systems Ltd. 2026
- **Bravo Individual Award**
Persistent Systems Ltd. 2023, 2024
